

# Friction & Air Resistance – Tutorial

---

1. Mass A (2kg) and mass B (3kg) are joined by a light inextensible string which passes over a smooth pulley fixed at the edge of a smooth horizontal table. Initially, A is held at rest on the table while B hangs freely over the side of the table. The coefficient of friction between the table and mass A = 0.5.

By applying Newton's second law to A and to B, calculate:

- (a) the acceleration which occurs when the system is released. ( $3.92 \text{ m/s}^2$ )
- (b) the tension in the string. ( $17.6 \text{ N}$ )

2. A stone block of mass 2400 kg is to be pulled up an inclined plane of at  $40^\circ$  to the horizontal by a steel cable over a pulley as shown. coefficient of friction between stone and plane = 0.59.

Calculate:

- (a) the mass  $m_a$  required to prevent the block from sliding down the plane. ( $458 \text{ kg}$ )
- (b) the larger mass  $m_b$  required to pull the stone 15 m up the plane in 10 s. ( $2700 \text{ kg}$ )

3. A 68 kg skydiver jumps out of an aeroplane.  
 density of air =  $1.2 \text{ kg/m}^3$   
 area of skydiver =  $0.7 \text{ m}^2$  (before opening chute) =  $30 \text{ m}^2$  (chute open)  
 drag coefficient = 0.45 (before opening chute) = 1.5 (chute open)

- (a) Before the parachute is opened, calculate the skydiver's
  - (i) acceleration when falling at 20 m/s ( $8.7 \text{ m/s}^2$ )
  - (ii) acceleration when falling at 40 m/s ( $5.4 \text{ m/s}^2$ )
  - (iii) terminal velocity ( $59.4 \text{ m/s}$ )
- (b) The parachute is opened when falling at terminal velocity. Calculate the acceleration when the parachute is opened at this speed. ( $1390 \text{ m/s}^2$ )

4. A table tennis ball is released from the bottom of a swimming pool, and rises to the surface under the influence of a buoyancy force which, according to Archimedes' principle, is equal to the weight of displaced water.  
 ball radius = 20 mm, ball mass = 2.7 g; density of water =  $1000 \text{ kg/m}^3$   
 drag coefficient = 0.5  
 Calculate the terminal velocity reached. ( $0.96 \text{ m/s}$ )
